Your Technical Solutions Partner

EDITORIAL CALENDAR

CONSTRUCTION MATERIALS

*REDISPERSIBLE
POLYMER
POWDER*

Among the materials #ALLCHEM provides is the redispersible polymer powder (RDP), which highly improves the performance and properties of various cement-based products. With a complete range of premium solutions, ALLCHEM is your trusted supplier for construction chemicals, with a dedication to meet all clients' needs.

DECORATIVE COATINGS

*MINERAL
OIL DEFOAMER*

Mineral oil defoamers are substances commonly used to reduce or eliminate foaming in various industrial processes and applications, including manufacturing of paint, food production, wastewater treatment, and more. ALLCHEM offers comprehensive selection of mineral oil defoamers, designed to cover the needs of all industries.

PIGMENTS

OXIDES

ALLCHEM is your #1 supplier of high quality Oxides. These substances have important industrial applications, and are frequently used in a wide range of industries.

HOME CARE
*BENZALKONIUM
CHLORIDE*

Benzalkonium chloride, often abbreviated as BAC, is a valuable chemical compound that guarantees versatility and effectiveness in disinfection and cleaning. Various industries such as healthcare, pharmaceuticals and home care productions, rely on it as an effective disinfectant and antiseptic agent.

ALLCHEM has an established partnership with LORAMA GROUP, an expert manufacturer of polysaccharide resins additives, and Functional Extenders. Founded in 1977, LORAMA is headquartered in Ontario, Canada, and has grown today to supply over 90 markets across the world.

PERSONAL CARE

CARBOMER

ALLCHEM offers various types and grades of carbomers, each with different properties for specific applications. Carbomer is a synthetic polymer commonly used in personal care products to increase the viscosity and consistency, to maintain the pH of a product, to enhance moisture retention, and many others functions.

Explore the World of Chemistry

Elastomers are a class of polymers that are often used as sealing materials. They can create tight and flexible seals to prevent the leakage of liquids or gases, for various industries, including construction.

Elastomers are a class of polymers known for the elastic properties. Among their many usages, Elastomers are known to be used as sealing materials that could prevent the leakage and spillage of substances.

ALLCHEM supplies its clients across the world with high-quality elastomers, guaranteeing exceptional effectiveness and durability.
